

Heatmap visualization of gene expression data across 144 samples, grouped into two clusters of 72 samples each. The color scale ranges from dark red (low expression) to bright green (high expression). The x-axis is labeled with sample IDs 0, 24, 48, 72, 96, 120, 144 for both clusters. A barcode is visible on the left side of the heatmap.
